

# Eagle Quantum Premier® 12 Channel High Speed Deluge Module (HSDM) EQ3780HSDM

## DESCRIPTION

The EQ3780HSDM High Speed Deluge Module (HSDM) is specifically designed to expand the capability of the Det-Tronics Eagle Quantum Premier® (EQP) System by providing the capability to activate ultra-high speed suppression systems for hazardous applications such as munitions manufacturing.

The HSDM provides up to six (6) configurable input channels and up to six (6) configurable output channels that can be programmed for supervised or unsupervised operation. Typical initiating devices include optical flame detectors, heat detectors, and manual pull stations. Output channels are designed to activate Factory Mutual (FM) approved solenoids. Solenoids that are activated by the HSDM are typically used to initiate pilot-actuated deluge valves.

A unique cascade output feature allows the output of the HSDM to be connected to the input of another HSDM, extending the systems capability to activate multiple solenoids with a single input.

An LED indicator is provided that indicates normal or fault status of the entire HSDM. Additionally, each input and output channel of the HSDM is provided with LED indicators for normal, active and fault conditions.

The HSDM can be mounted directly to a panel, or it can be DIN rail mounted. System status can be determined using the system status indicators that are resident on the module and the Eagle Quantum Premier Safety System Software (S3).
