

**50 Years of Det-Tronics:** Thank you for trusting us with what matters most.

In 1973, Ted Larsen, William Crosley, and Alan Petersen founded the company that became Det-Tronics built upon a guiding principle: to be of service to humanity. Today, as we celebrate 50 years of innovation in fire and gas detection solutions, we must first start by thanking you for trusting us to protect the people and property that matter most. This is a responsibility that we do not take lightly, and we will continue to provide accuracy and reliability as the gold standard for fire and gas leak detection.

While the products and solutions have evolved over the last 50 years, Det-Tronics never abandoned its core tenet of protecting people in high-value and high-risk environments from the dangers of undetected fire or gas leaks. At its inception, Det-Tronics distinguished itself by using ultraviolet electronics for flame detection, an innovation that has saved countless lives. The addition of infrared gas detection capabilities fueled brand growth around the world, and the integration of microprocessor-based detection technologies introduced a level of sophistication to the industry that previously did not exist.

Det-Tronics remains committed to continuous innovation for best-in-class flame and gas detection and hazard mitigation systems - which have secured hundreds of national and global safety and performance-tested certifications and approvals.

As we proudly reflect on our history of innovation, we are laser-focused on cutting-edge solutions to meet the demanding requirements and challenges of tomorrow. From the shift to renewable energy to various approaches to decarbonization, advanced detection technologies designed for traditional and emerging energy sources will be central to the safety systems we implement in the coming years.

Thank you for your valued business, partnership, and continued support. We look forward to protecting and preserving what matters most to you for many decades to come.

Thank you!
